ABSTRACTS OF WORLD MEDICINE

UNDER THE DIRECTION OF

HUGH CLEGG, M.A., M.D., F.R.C.P., Editor, *BRITISH MEDICAL JOURNAL*

EDITOR

DONALD CROWTHER, B.A., B.M., B.Ch.

ASSISTANT EDITOR

A. DEWAR DUFF, M.B., Ch.B.

SUB-EDITOR

MARJORIE H. HOLLOWELL

This journal is planned to provide the reader with a selection of abstracts of the more important articles appearing in medical periodicals published in different parts of the world. Comment by the abstractor, when thought necessary, is inserted between square brackets, usually at the end of an abstract. In some instances only the titles of articles are provided.

The titles of journals are given in full and also abbreviated according to the rules adopted in the *World List of Scientific Periodicals* and in *World Medical Periodicals*. The titles of articles from foreign journals are translated into English.

This journal is essentially a guide to work in progress in the world's medical centres. No abstract can be regarded as a substitute for the article abstracted. For complete information the original article must be consulted. Our aim is to give the reader sufficient details in an abstract to enable him to judge whether the original is, for him, worth reading in full.

The abstracts are grouped in broad classifications and, so far as possible, those dealing with medical and surgical aspects of the same problem appear together under the same heading. The specialist will, it is hoped, learn from this journal of work done in other fields as well as in his own. The general practitioner will be able to keep abreast of modern knowledge in the various specialties. The representation in one journal of the several aspects of Medicine will, it is believed, give an integrated picture of the whole, necessary in this age of specialization.

The NEW Elizabethans . . .

With hopes higher and more well-founded than the merchant venturers of an earlier age, the new Elizabethans sail into strange seas of discovery and development. Today's maps of medical knowledge, though incomplete, will lead them safely through many dangerous waters; and to the making of those maps Parke-Davis have contributed much of lasting value.

By ceaseless research into the causes and conquest of pain and disease, Parke-Davis help guard the health of those upon whom the future depends.
